PROFESSIONAL SUMMARY

BSc Data Science student with a strong foundation in Python, Data Structures, SQL, AI/ML, and data analysis. Experienced in developing practical AI-based projects and participating in hackathons, with a focus on solving real-world problems using machine learning and data-driven approaches. Eager to apply technical skills in a Data Science, Data Analyst, or AI/ML internship while continuously developing industry-ready skills.

FEATURED PROJECT

IBM Data Science Capstone — SpaceX Falcon 9 Launch Analysis & Prediction

Data Science Project | 2026

[Github Link](#)

- Collected and integrated SpaceX launch data through REST APIs and web scraping, followed by data cleaning and wrangling for downstream analysis.
- Performed EDA and SQL-based analysis to identify launch patterns and relationships across payloads, launch sites, orbits, and mission outcomes.
- Built interactive visual analytics using Plotly, Folium, and Dash to communicate geographic and operational insights from launch data.
- Developed and evaluated a classification model to predict Falcon 9 first-stage landing outcomes, applying a complete end-to-end Data Science workflow.

CORE SKILLS

- **Programming:** Python, SQL, C++
- **Data Science:** Pandas, NumPy, Data Wrangling, Exploratory Data Analysis, Statistical Analysis
- **Data Visualization:** Matplotlib, Seaborn, Plotly, Folium
- **Machine Learning:** Scikit-learn, Classification, Logistic Regression, SVM, Decision Trees, KNN, Feature Scaling, Hyperparameter Tuning, Model Evaluation
- **Data Acquisition & Analytics:** REST APIs, Web Scraping, SQL Analytics, Interactive Dashboards
- **Tools & Platforms:** Jupyter Notebook, Google Colab, Git, GitHub, Plotly Dash
